EXPERIENCE

Point72 · *Software Engineer, Infrastructure Automation* New York, NY · Oct 2025 – Present

Nexus Apps: internal PaaS where non-technical users build, deploy and run their own apps on AWS EKS; hosts ~50 apps, including business-critical ones

- Lead engineer (top committer) on the FastAPI/PostgreSQL control plane. Its async deploy API and reconcilers turn Dockerfile source into SSO-protected apps in ~3 minutes (~1-minute redeploys) via GitHub Actions, ArgoCD and Helm.
- Built the React/TypeScript app console where owners deploy apps, control access via AD groups, manage secrets, and view logs and CPU/memory metrics. Onboarded self-service S3 (with fail-safe bucket reclaim), EBS, DynamoDB and RDS onto the platform's ACK/Helm resource framework.
- Scaled the control plane from a singleton to stateless web and multi-replica worker tiers with row leases, stale-event fencing and advisory-locked migrations, and migrated deploy uploads to S3 with no downtime. Built observability end to end with Prometheus, Grafana and alerts.
- Built an MCP server and Claude Code skill library so users build, deploy and operate apps from an AI assistant.

Coworker: autonomous AI agent platform built as a personal initiative and adopted organically by ~20 engineers firm-wide, many as their daily AI driver

- Built an agent-agnostic runtime on Linux VDIs that orchestrates Codex, Claude Code, Gemini and OpenCode through a SQLite-backed task queue, cron scheduling and autonomous PR lifecycle management, connected to the firm-wide skills namespace.
- Runs recurring autonomous agents for dependency updates and Snyk/SonarQube remediation. Users built ticket triage, sprint management and a team-wide PR review agent on it, with access to every codebase and design doc and the ability to run test suites.
- Shipped a real-time dashboard (WebSocket live terminals, SSE log streaming) and a plugin system with 20+ integrations (JIRA, GitHub, AWS, Confluence, MCP).

Infrastructure Automation Platform: event-driven workflow engine on ECS (SQS, MongoDB) running 25 firm-wide workflows, including machine patching and AWS account and repo provisioning

- Contributed to the core design. Built and own, as SME, the self-service reboot workflow for 3,000+ Linux VMs and bare-metal servers, orchestrating vCenter, Redfish, LogicMonitor and Ansible.

Amazon Web Services · *Software Engineer, FSx* New York, NY · Sep 2022 – Oct 2025

- Co-developed the high-performance Rust userspace block device (ublk, io_uring) behind FSx for OpenZFS Intelligent-Tiering, a launched storage class providing fully elastic, S3-backed file storage billed on data stored rather than provisioned capacity.
- Engineered the launched on-demand, cross-region and cross-account replication for FSx for OpenZFS, transferring multi-terabyte ZFS snapshots via ZFS send/receive.
- Designed and implemented the launched IPv6 and dual-stack support for FSx for OpenZFS across control plane, data plane and internal tooling, available in all commercial, GovCloud and China regions.
- Found and escalated a kernel-level bug in Amazon Linux 2023's NFS server stack during customer triage, which started a kernel-team investigation into NFS reliability.

Moody's Analytics · *Software Engineer I, Structured Finance* New York, NY · Sep 2021 – Aug 2022

- Built a pipeline that crawled and parsed 2M+ CSV and PDF financial files (Python and C# crawlers), feeding a C# tool analysts used to review and upload thousands of documents monthly to S3.
- Wrote large-scale T-SQL and Spark queries computing CLO data for risk and performance modeling.

PROJECTS

Tend (usetend.org): iOS relationship-maintenance app (Swift/SwiftUI) with smart reminders, AI-generated message suggestions and a StoreKit 2 freemium subscription, plus a Next.js marketing site.

Personal Website & Blog (christurgeon.com): personal site built with Next.js, TypeScript, Tailwind CSS and MDX, featuring a technical blog and a photography gallery.

EDUCATION

Rensselaer Polytechnic Institute · *B.S. Computer Science, GPA 3.76* Troy, NY · Aug 2017 – May 2021

Rensselaer Medal, Dean's List, Magna Cum Laude, Rensselaer Center for Open Source
